

Globalization and Advances in Technology for Work, Employment and Development of a Country (12 marks)

- Creation of New Job Opportunities

Advances in technology have created many new types of jobs in the digital economy. People can now work in fields such as digital marketing, software development, online business, and content creation.

Example:

Many Malaysians work as online sellers on platforms like Shopee and Lazada. These platforms allow individuals and small businesses to sell products locally and internationally.

- Growth of Remote Work and Flexible Employment

Digital technology allows people to work remotely without needing to be physically present in an office. This increases employment opportunities because workers can collaborate with companies from other countries.

Example:

Many Malaysian professionals use platforms like Zoom and Microsoft Teams to attend meetings and work with international companies.

- Economic Growth and National Development

Globalization and technology help countries grow economically by attracting foreign investment, improving productivity, and increasing trade opportunities.

Example:

Malaysia's technology sector has grown with companies such as Grab creating thousands of jobs for drivers, programmers, and digital workers in the region.

Convergence of the Internet (12 marks)

- Convergence of Devices

Modern digital devices combine the functions of many traditional devices into one. This makes communication and entertainment more convenient.

Example:

A smartphone like the Samsung Galaxy can be used as a phone, camera, music player, internet browser, and gaming device.

- Convergence of Media Content

The Internet allows different types of media such as text, audio, video, and images to be delivered through the same platform.

Example:

On YouTube, users can watch videos, listen to music, read comments, and share content with others on the same platform.

- Convergence of Communication Services

Different communication services such as messaging, voice calls, and video calls are now integrated into one application.

Example:

WhatsApp allows users to send text messages, make voice calls, video calls, and share files using a single application.

Important Internet Ethics for Senior Citizens (12 marks)

- Protecting Personal Information

Senior citizens should avoid sharing sensitive personal information online such as bank details, passwords, or identification numbers.

Example:

Scammers may send fake messages through WhatsApp asking for bank information. Senior citizens should not share such details with unknown individuals.

- Identifying Online Scams and Fake Information

Senior citizens should be careful when reading information online because not all information on the Internet is true.

Example:

Some fake promotions on Facebook may claim that users have won prizes. Senior citizens should verify information before believing or sharing it.

- Respecting Others in Online Communication

Internet users should communicate politely and avoid spreading offensive messages or harmful comments online.

Example:

When using social media platforms such as Facebook, users should avoid posting comments that insult other people's race, religion, or culture.

Patent (12 marks)

- Protects New Inventions

Patents protect new inventions from being copied or used by others without permission. This ensures that inventors receive recognition and benefits from their work.

Example:

Technology companies like Apple patent many of their smartphone technologies to prevent competitors from copying their designs.

- Encourages Innovation

Patents encourage individuals and companies to develop new technologies because their inventions will be legally protected.

Example:

In Malaysia, inventors can register patents with the Intellectual Property Corporation of Malaysia to protect their technological inventions.

- Promotes Economic Development

Patents help countries grow economically because they encourage research, development, and technological advancement.

Example:

Malaysian universities and companies that develop new technologies can register patents through Intellectual Property Corporation of Malaysia to commercialize their inventions.
